

Object

Parent class of all Java objects.

Parent

None (and itself at the same time, don't question it)

Variables and Functions

| Name | Type | Info |
|-----------------------|-------------------------|---|
| toString() | String | Tag collection type. |
| equals(Object other) | boolean | Checks equality with another object. |
| hashCode() | int | Hash code of this object. It is used to optimize maps and other things, should never be used for object equality. |
| class | Class | Object's type/class. |
